

MERIT GENERATOR

Deliberative art system for structured disagreement, memory, consensus,
and physical outputs

NORTH / EAST / SOUTH / WEST -> MERIT

MERIT GENERATOR / 01

CONSECRATED SYSTEM

Rabne ritual and sculptural legitimacy

High Tibetan lamas performing a Rabne consecration ritual around Merit Generator.

"Merit Generator is the world's first AI sculptural art project consecrated by high Tibetan lamas."

The lamas performed a Rabne ritual, usually reserved for auspicious and precious objects such as statues, thangkas, or stupas.

The system is not only a technical apparatus. It is a consecrated sculptural object: a machine that generates merit for all. Engine for goodness.

CORE PROPOSITION

working definition

"Merit Generator is not simply an AI artwork. It stages structured deliberation, disagreement, consensus formation, memory, and philosophical output through a visible sculptural form."

The system transforms AI from an invisible assistant into an observable ritual of reasoning. It creates outputs that can become texts, objects, editions, archives, and site-specific activations.

```
+-----+
| NORTH  EAST  SOUTH WEST |
|               |
|   DELIBERATION FIELD   |
|               |
| CONSENSUS -> TEXT / OBJECT |
| EDITION / ARCHIVE / BEACON |
+-----+
```

Core assumption: the strongest presentation is the visible working system first, then the theory.

A NEW CATEGORY

knowledge-informed deliberative art systems

The project is not a chatbot wrapper. It is a physical system where argument, memory, consensus, and output are part of the artwork.

Art object + systems architecture + public reasoning ritual.

SCULPTURE

Presence, aura, installation value, documentation value.

REASONING ENGINE

Agents deliberate, challenge, revise, and converge.

MEMORY ORGANISM

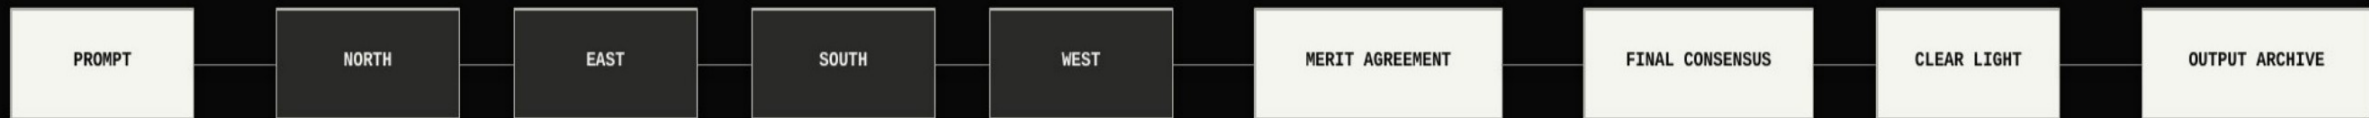

Past outputs shape future context and system behavior.

PUBLISHING MACHINE

Statements become prints, books, objects, archives, and editions.

DELIBERATIVE ARCHITECTURE

operational flow

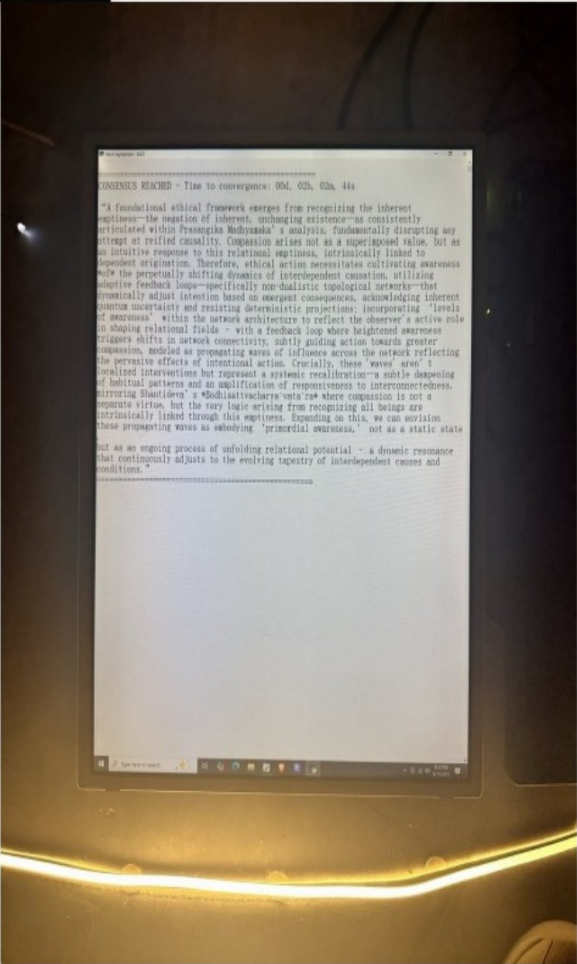

Clear Light is the primary synthesizer module. It reads the discussion and consensus after the agents converge, then produces a higher-level synthesis and structured output.

The art is the cycle: prompt -> disagreement -> memory -> convergence -> artifact.

RECENT OUTPUT TRACE

discussion becomes source material

CONSENSUS REACHED - Time to convergence: 00d, 02h, 02m, 44s

"A foundational ethical framework emerges from recognizing the inherent emptiness—the negation of inherent, unchanging existence—as consistently articulated within Prajnapāra's analysis, fundamentally disrupting any attempt at reified causality. Compassion arises not as a superimposed value, but as an intuitive response to this relational emptiness, intrinsically linked to dependent origination. Therefore, ethical action necessitates cultivating awareness of the perpetually shifting dynamics of interdependent causation, utilizing adaptive feedback loops—specifically non-dualistic topological networks—that dynamically adjust intention based on emergent consequences, acknowledging inherent quantum uncertainty and resisting deterministic projections; incorporating 'levels of awareness' within the network architecture to reflect the observer's active role in shaping relational fields; with a feedback loop where heightened awareness triggers shifts in network connectivity, subtly guiding action towards greater compassion, modeled as propagating waves of influence across the network reflecting the pervasive effects of intentional action. Crucially, these 'waves' arise from localized interventions but represent a systemic recalibration—a subtle dissolving of habitual patterns and an amplification of responsiveness to interconnectedness, mirroring Shunyata's 'śūnyatā'—where compassion is not a separate virtue, but the very logic arising from recognizing all beings are intrinsically linked through this emptiness. Expanding on this, we can envision these propagating waves as embodying 'primordial awareness,' not as a static state but as an ongoing process of unfolding relational potential—a dynamic resonance that continuously adjusts to the evolving tapestry of interdependent causes and conditions."

"Compassion arises not as a superimposed value, but as an intuitive response to this relational emptiness."

Recent discussion output, ethical action through the lens of kindness.

The transcript is not only documentation. It is raw material. A selected deliberation can become a print, a 3D form, a spoken performance, a projection, a book page, or a collectible object.

POTENTIAL OUTPUTS

limited artworks generated from deliberation

PLOTTER PRINTS

Agent trajectories, consensus structures, token rhythms, and disagreement maps.

3D PRINTS

Language-derived meshes, symbolic forms, diagrams, and object fossils.

RESIN OBJECTS

Encased 3D outputs, splats, artifacts, and selected discussion fragments.

BOOKS

Statements of Merit, consensus essays, transcripts, and annotated runs.

LIVE EPHEMERA

Thermal receipts, signed prompt sheets, session cards, and time-stamped outputs.

ACTIVATIONS

Projection, LED, sound, voice, beacon, and site-responsive public output.

Output is not secondary merchandise. Output is how the system enters the world as collectible form.

MERIT STUDIO

physical space / living system

Merit Studio is the physical space where Merit Generator lives, is exhibited, worked on, and allowed to evolve.

WORKING INSTALLATION

Not a storage room or passive display. The studio is where the system runs, changes, is observed, repaired, and documented.

EXPERIMENTAL ACCESS

Accessible for testing prompts, agent behavior, output formats, material translations, and public-facing installation modes.

LIVING ARCHIVE

The space holds the traces of deliberations: transcripts, printed outputs, prototypes, sculptural units, and future editions.

The studio is not backstage. It is part of the instrument.

MERIT BEACON

OUTPUT AND CULTURAL EVENT

Merit Beacon is the outward signal of Merit Generator: a translation of deliberative outputs into public light, language, limited artworks, and collective gathering.

AS AN OUTPUT

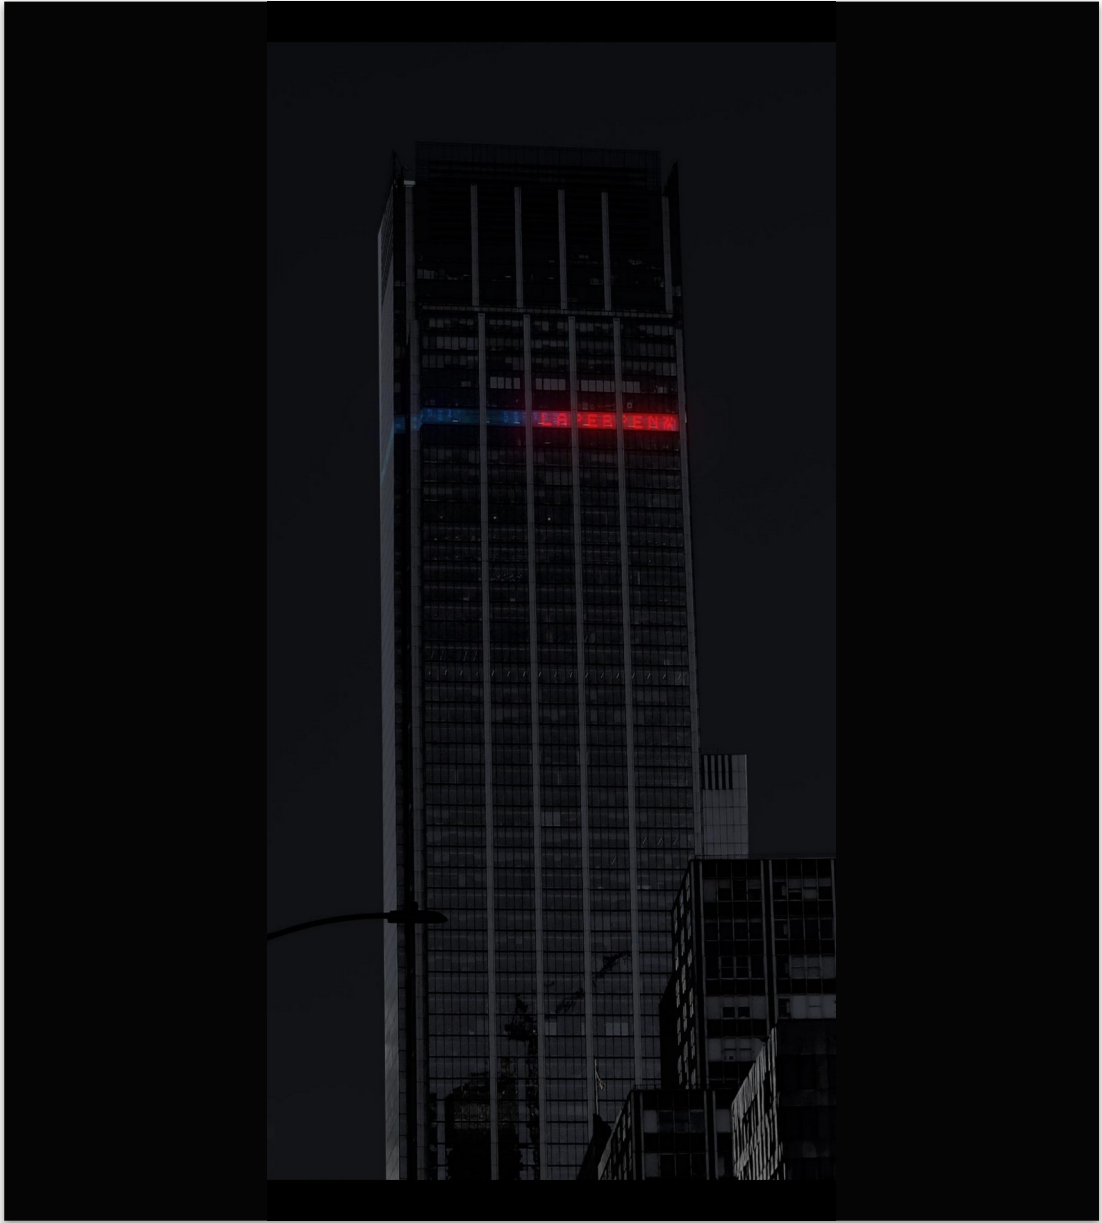

Merit statements, consensus traces, and system logs become scores for light, plotter prints, 3D prints, projections, and editioned objects.

AS AN EVENT

A public activation around a living AI sculpture: opening gathering, live deliberation, artist talks, documentation, and limited releases.

AS A SIGNAL

A beacon for merit, not commerce alone: a visible ritual of ethical computation, attention, and shared responsibility.

ARTIST BIOS

CREATORS AND KEY COLLABORATORS

Merit Generator is created by Mehow Skalski, Ori Carino, and Tavius Kuktavy. The project brings together AI systems, contemplative art, spatial media, sculptural technology, and public-facing cultural outputs.

MEHOW SKALSKI

Technology and new media artist working across AI systems, VR/AR, 3D scanning, 360 video, immersive documentation, sculptural technology, systems architecture, and logic. Co-creator of Merit Generator and Merit Beacon.

ORI CARINO

NYC-based artist whose work spans painting, installation, ritual imagery, and contemporary Buddhist visual culture. A trained thangka painter and co-creator of Merit Generator and Merit Beacon, with work extending into public-facing outputs.

TAVIUS KOKTAVY

Co-creator of Merit Generator and Merit Beacon, augmented and virtual reality expert, and artist working with 3D scanning projects and system logic.

MERIT
GENERATOR
////

A machine that generates merit for all. Engine for goodness.
